

Less CO₂ in production ...

The carbon footprint of E-VITA technology is **only about 15% that of conventional seed treatment like chemical seed dressing.**

... more CO₂ binding in the soil!

E-VITA PLUS increases yield in avg. by 5-6 dt per hectare, enhancing CO₂ sequestration in the soil.

In 2024, 15,000 tons of grain were treated with E-VITA PLUS, covering 60,000 hectares and binding an estimated 42,000 tons of CO₂.

**Are you ready to reduce your CO₂ footprint?
Let's take the path to a more sustainable future **together.****
